

Frontend Intern Assignment

Project: Simplified CSAT Campaign Builder

Objective

Build a simplified CSAT Campaign Builder. The application should allow a user to configure a CSAT popup from a Content tab and a Styling tab while showing a live mobile preview that updates in real time.

What is CSAT?

Customer Satisfaction (CSAT) is a metric used by companies to measure how satisfied customers are with a product, service, or experience. It is typically collected through a short feedback form where users rate their experience (for example, on a scale of 1–5 or by selecting stars) and may optionally leave comments.

In this assignment, you will build a simplified CSAT Campaign Builder that allows users to configure a feedback popup and instantly preview how it will appear on a mobile device.

The project focuses on:

- Creating a Content configuration page.
- Creating a Styling configuration page.
- Building a real-time mobile preview that reflects all changes made in the Content and Styling sections.

Note: This is not the complete AppStorys CSAT module. Only the features described in this assignment are required.

Tech Stack

Frontend

- React.js
- JavaScript or TypeScript
- CSS / Tailwind CSS / SCSS
- Vite

Deployment

- Vercel / Netlify / Render / Firebase Hosting

Project Requirements

The project consists of three sections:

1. Content Page
2. Styling Page
3. Live Mobile Preview

Content Page

Initial Feedback

- Title
- Subtitle

Feedback Page

- Rating (Stars or Numbers 1–5)
- Dynamic Options (Add/Delete)
- Additional Comment Toggle
- Submit Button Text

Thank You Page

- Upload Media (Supported formats: PNG, JPG, JPEG, GIF, Lottie)
- Title
- Subtitle
- Button Text

Styling Page

Allow users to customize:

- Background Color
- Title Color
- Subtitle Color
- Button Color
- Button Text Color
- Font Size & Font Weight
- Border Radius
- Button Width & Height
- Rating Selected/Unselected Colors

Live Mobile Preview

Create a mobile preview on the right side of the screen.

Every change made in the Content or Styling page must be reflected instantly in the preview.

No Save button or page refresh should be required.

Functional Requirements

- Real-time Preview
- Controlled React Components
- Dynamic Add/Delete Options
- Responsive Design
- Reusable Component Structure

Deliverables

1. GitHub Repository

2. Live Deployment URL

3. README.md including:

- Setup Instructions
- Tech Stack
- Folder Structure
- Deployment Link

Submission

Submit:

- GitHub Repository Link
- Live Demo URL
- README.md
- Deployment URL
